Intex Announces INTEXreds

Needham, Massachusetts, October 1, 2010 - Intex Solutions, Inc., the leading provider of comprehensive cash flow models and analytical tools for the global securitization market, is pleased to introduce INTEXreds, a Web-based cash flow projection tool that supports investor analysis and due diligence for structured finance securities during a deal's initial marketing phase, commonly referred to as the "red" or "pre-red" period.

The new offering leverages Intex's highly developed RMBS, ABS, CMBS and CDO cash flow modeling language and structuring software that is widely accepted as the market standard and it further facilitates the current practice of sharing "pre-price" cash flow models between Intex clients, used globally for over 15 years. INTEXreds, at no additional cost, will provide investors, who do not have an Intex subscription, the ability to view the collateral, run user-defined prepayment and default/severity cash flow stress scenarios and view the deal waterfall script for pre-price cash flow deal models created and shared by underwriter/issuers.

Kevin McCarthy, Managing Director stated, "Regulatory bodies, in the United States, Europe and elsewhere, have expressed the need for waterfall disclosure to a broader universe of investors. INTEXreds addresses this need, with little or no additional burden to market participants, as it's already common practice for underwriters and issuers to share Intex pre-price files with potential investors who are Intex subscribers."

INTEXreds is scheduled to be available to qualified investors starting on or before November 15, 2010. For more information, go to <http://www.intex.com> after November 15th.
